Goeie more Lizbe

Sien asb die eops hier onder.

Kan jy asb vir my duidelikheid gee ivb met die volgende vrae van LBRCT:

Our queries include:

1. **How much water is currently being abstracted under licence?** *240 000m3 servitude water on neighbouring property (under same owner) but to be transferred to 399/5 to be combined with new additional water*
2. **How much additional water will a new licence allow to be abstracted annually?** *120 000m3 from Eksteenskloof*
3. **What is the seasonal usage pattern (peak in summer or winter)?** *Winter abstraction for storage to be used for irrigation that peaks in summer*

Groete

Inge

Subject: Registering as IAP for Sangasdrift Trust: Hut Dam

Project: Sangasdrift Trust: Hut Dam

Registering as an IAP on behalf of the Lower Breede River Conservancy Trust (LBRCT)

Address: PO Box 149, Witsand, 6666

Contact details: conservation@breede-river.org, 028 537 1296

Preferred contact method: By e-mail to above address

Indication of interest: The LBRCT is the implementing agent for the Breede estuary, our interest in the dam is the effect of fresh water extraction from the Breede river system may impose on the health of the estuary.

Our queries include:

4. How much water is currently being abstracted under licence?
5. How much additional water will a new licence allow to be abstracted annually?
6. What is the seasonal usage pattern (peak in summer or winter)?

Kind regards,

Sarah Halse (M.Sc) | *Conservator*
