Olrite, its almost 100 meters, let me enquire from our Freshwater Ecologist.

I will revert back to you.

Regards,

Ntombi

We did not observe a non-perennial river during the site visit. But looking at the Google earth image, about 98 meters.

Please see attached.

Thank you.

In this case there is no identifiable river banks on or near the site. The non-perennial river as indicated on the map is not visible on site?!

Hi Inge,

In the BAR you only mentioned the distance in terms of NEMA EIA Regulations, which is 32m .The general conditions specifies the distance between watercourse and proposed project.

In the absence of a determined 1 in 100 year flood line or riparian area the area within 100m from the edge of a watercourse where the edge of the watercourse is the first identifiable annual bank fill flood bench.

Regards,

Ntombi Feni

Dear Feni

The conditions as set out by BGCMA will be included in the BAR and EMPr.

I have a query with regards to your comments about the 50 year and 100 year flood lines and 50-year floodline of any watercourse.

Please take note that this application is for a 100m<sup>2</sup> footprint mast and not housing units, bulk infrastructure, water supply or sewage disposal. Please also note that the location of the mast changed slightly, refer to the attached locality map and new water resources map indicating that the proposed location will be more than 60m away from the non-perennial stream.

The development will not use any water.

How to I obtain information regarding the 50year and 100year floodlines?  
Will your department be able to provide me with this information?

Kind regards  
Inge

Morning Inge,

Please find the attached comment. I forgot to email them to you.

Thanks for the reminder. Hard copy will be posted to you.
