Project Description & Location: (33° 22' 31.67"S, 19° 22' 13.15"E)

The proposed development entails the construction of a new dam for the storing of winter water for summer irrigation. It is proposed that construction of the dam occurs in two phases. For phase 1 it is proposed that the dam will have a capacity of ±65000 m³, a maximum wall height of ±11.1m, a total surface area of ±2ha. An existing water use for the taking of water exists and water will come from the Rietvallei scheme for phase 1. For phase 2 it is proposed that the dam will have a capacity of ±165000m³, a maximum wall height of ±14.8m, a total surface area of ±3.6ha. A separate WULA will have to be done for the proposed phase 2 development. The dam will be located on agricultural land.

Description of Alternatives:

Alternative includes layout options and the option of not proceeding with the proposed development (the No-Go option) will be discussed in the application process.
