

**PROPOSED TOWNSHIP DEVELOPMENT ON ERF 2642 AND PORTION
14 OF FARM 48, OPWAG, !KHEIS LOCAL MUNICIPALITY**

APPLICANT: !Kheis Local Municipality

COMMENT AND RESPONSE REPORT

(DENC Ref. No: NC/EIA/11/ZFM/!KHE/OPW1/2020)

No.	Comment Date, Comment Format, Organisation/I&AP	Comment	Response from EAP/Applicant/Specialist/Project Manager <i>Please note: All registered I&APs will be given the opportunity to comment on the draft EIR.</i>
Comments Received on Initial Public Participation			
1	Date: 17/06/2020 Format: Email Letter I&AP: Gariiep Watch (Chairman: Mr Ferdie Botha/ Technical Advisor: Mr Fritz Bekker)	<p>Gariiep Watch is a civic society organisation that endeavours to protect the lower Orange River through effective monitoring and data collection, improved communication by role-players and the enhancement of public participation.</p> <p>We noted your abovementioned NEMA Public Participation Process (Ref. 0512) for a new township development at Topline, with much concern.</p>	<p>Respondent: EAP</p> <p>Noted. Thanks for your comment.</p>
		<p>Gariiep Watch performs quarterly water quality studies and a risk assessment procedure at various localities in the lower Orange River including the river reach flowing through the !Kheis Local Municipalities jurisdiction. Our water quality results show that a number of point and diffuse sources of sewerage pollution may be affecting the surface and ground water resources in the vicinity of these townships and beyond. Furthermore, recent site visits to sewerage water infrastructure at these !Kheis townships showed that much of the sewerage water infrastructure is not being maintained or used for it intended purpose. Pump stations to the oxidation dam systems are not working, sewerage infrastructure is being vandalized, oxidation dam linings are damaged or removed and raw sewerage is being disposed into the veld or towards dry water courses.</p>	<p>Respondent: EAP</p> <p>Noted, issues relating to the water quality and sewage infrastructure will be addressed in the Environmental Impact Report (EIR). A Freshwater Assessment, and Engineering Report detailing services infrastructure, will be included in the EIR.</p>

No.	Comment Date, Comment Format, Organisation/I&AP	Comment	Response from EAP/Applicant/Specialist/Project Manager
		<p>The photographs in Figure 1 show some of the oxidation dam systems encountered at !Kheis Local Municipality during 2019.</p>  <p>Figure 1: Oxidation dam systems at !Kheis Local Municipality (2019)</p> <p>The extension of existing townships that already have inadequate, unmaintained or unused sewerage infrastructure will only aggravate their pollution risk towards the downstream environment.</p> <p>We therefore object to any new township development in the !Kheis Local Municipality and request the following information:</p> <ol style="list-style-type: none"> 1. A list of all new proposed township developments in the !Kheis Local Municipality where EnviroAfrica CC is the appointed environmental practitioner. 2. Details pertaining to new sewerage infrastructure that are planned for these developments. <p>Please also register Gariep Watch as an I&AP for these new township developments.</p>	<p>Response from EAP/Applicant/Specialist/Project Manager</p> <p><i>Please note: All registered I&APs will be given the opportunity to comment on the draft EIR.</i></p> <ol style="list-style-type: none"> 1. Requested information has been sent to the I&AP. 2. Noted, this will be addressed in the EIR. An Engineering Report detailing services infrastructure, will be included in the EIR. <p>Noted, Gariep Watch has been registered as an I&AP.</p>

2	<p>Date: 16/06/2020 Format: Email Letter I&AP: Schalk and Marike van der Merwe (smvdmhome@gmail.com) (074 366 2276)</p>	<p>We have received a publication regarding the proposed project for extending the current housing in this location with a further 730 low income erven.</p> <p>We live in the Opwag area and are daily in the Township as our permanent and temporary workers live there. We also have participated in outreaches and have a close relationship with some of the people currently living there.</p> <p>Our concerns are:</p> <p><u>Water</u> During winter the canal that provides water for this section also have 4 dry periods of 14 days each. The dry periods are in sections of mostly 2 weeks and sometimes there is an interval of three weeks. Almost every time after the first weekend of the 2 week interval, the people that works with us ask if they can borrow our water tanks (which are on wheels), fill up the water tank from our borehole, because there in no water. We provide that, but the situation is that the management of water in the township currently is a big concern. The Municipal supply of water via their water truck is not consistent and it cost them allot of money.</p> <p><u>Medical</u> The clinic is in Groblershoop which is around 8km from the township. Most of the residents of the Township do not have vehicles and there are also not regular trips to town via taxis. The people then must walk to the clinic. Medical service currently does not exist in the Township, and I cannot foresee that n clinic will be stationed in the township, within the near future. (Areas outside Groblershoop, like Wegdraai and Boegoeberg, do not have sufficient medical care, and they have so-called clinics)</p> <p><u>School</u> At the moment the nearest school is around 3km far. Most of the children walk to school and is a big concern for the vehicle drivers, as they use the same road to walk to and from school which the vehicles use. The school is already full and if more children attend the school then new classrooms needs to be build.</p>	<p>Response from EAP/Applicant/Specialist/Project Manager</p> <p>Please note: All registered I&APs will be given the opportunity to comment on the draft EIR.</p> <p>Respondent: EAP</p> <p>Noted, the supply of water to the proposed development will be addressed in the EIR. An Engineering Report detailing services infrastructure, will be included in the EIR.</p> <p>Noted. The Municipality (Applicant) and/or planners will address medical care in the EIR.</p> <p>Noted, The Municipality (Applicant) and/or planners will address road safety and institutional facilities in the EIR.</p>

No.	Comment Date, Comment Format, Organisation/I&AP	Comment	Response from EAP/Applicant/Specialist/Project Manager
		<p><u>Theft</u> We live and farm about 3km from the township. When the crops are almost ready for harvest, people stealing the crops are a real concern. Crops include grapes, pecan nuts, maize, Lucerne etc. Sheep farming is extremely high risk as people take the sheep out of a secure location and slaughter the animal for his own purpose. Sometimes even the people that are working with us, they get death threats if they try to stop the stealing of the crops. Most of the people that do work, work on the farms as general workers. If people steal the crops, then eventually there will not be any work for the people that want to work which just creates an more negative cycle. Stealing of poles inside the vineyard is also a big concern. The people come and steal the poles which are used for the vineyard. They use the poles to build their houses. All vacant houses on the Opwag road have been demolished, for building parts in the township.</p> <p>Here is already not enough work for the people staying in this township, with even more houses and occupancy the problem of theft will only escalate.</p> <p><u>Safety</u> As previously mentioned, stealing of the crops and poles, but also the safety of general workers living and working on the farm premises are a concern. Homeowners are also making sure that their security around their premises is right.</p> <p><u>!Kheis Municipality</u> This township will resort under this municipality. We as farm is busy for the last 8 years to try and buy erven in town for our workers for the day they retire. The municipality have appointment more than one consultancy to help them to do the sub-division of this land. This process has not been finished. We also do not get any regular bills as a farm community from the municipality. I can send proof of both these statements. My concern is, how the municipality that is already under constrain and cannot deliver basic services in there current surrounding, how they want to supply services to a new town-area that is 8 km away. Last month we had to lend them a tipper so they can remove the house-rubbish. Up to this stage, we do not even have a fenced rubbish-hole in</p>	<p>Please note: All registered I&APs will be given the opportunity to comment on the draft EIR.</p> <p>Noted, The Municipality (Applicant) and/or planners will address security in the EIR.</p> <p>Noted, short- and long-term employment opportunities will be addressed in the EIR.</p> <p>Noted, the Municipality (Applicant) and/or planners will address safety and security in the EIR.</p> <p>Noted, The Municipality (Applicant) and/or planners will address service delivery in the EIR. An Engineering Report detailing services infrastructure, will also be included in the EIR.</p>

		<p>town, because the costs are too high. For this development so far from town, they will need to set up a second rubbish-hole. So how will a development of this extend be funded? My parents stay in town, and sometimes they need to wait for weeks for sewerage-removal, again, how will this municipality be able to service and development of this extend so far from town.</p> <p>My question, then, how did they appoint a new consultancy to start this development, if they do not have money to cover basic services, and current town-expansions.</p> <p>The people currently staying in this township, are extremely excited about this development, because they have been promised that they will get free of charge new brick homes, with this new expansion. Some of our workers, staying in this township has stopped building their current houses, because they will get a brick house from the developers.</p> <p>We also want to register as an interested and affected party to this development.</p>	<p>Please note: All registered I&APs will be given the opportunity to comment on the draft EIR.</p> <p>The Municipality (Applicant) and/or planners will address funding in the EIR</p> <p>Noted, The Municipality (Applicant) to address in the EIR.</p> <p>Noted, thank you for the comment.</p> <p>Noted, you have been registered as an I&AP.</p>

		<p>We would also like to emphasize water availability. Our friends are struggling with water, for many years now. They borrow water tanks from the nearby farmers to provide water for their families, there is no help from the !Kheis municipality regarding water provision for the people of Uitkoms. They have also been struggling with toilets.</p> <p>My concern is with little work opportunities as in our current situation, to open housing here, we would like to add that there should also then, be made provision for work opportunities? There are no big towns nearby, this also means, many people would be given a piece of land, but they would have nowhere to go to sustain themselves here in the middle of nowhere.</p> <p>The clinic is in Groblershoop which is far from township. Most residents do not have vehicles. Those with vehicles charge R100 a trip to town and back for a 20km journey. This will kill the economic welfare of the people. Most people walk to clinic, most suffer because of that great distance, but they have no choice.</p> <p>BeAs previously mentioned, stealing of the crops and poles, but also the safety of general workers living and working on the farm premises are a concern. Homeowners are also making sure that their security around their premises is right.</p> <p>We also want to register as an interested and affected party to this development.</p> <p>Thank you for your reply on this letter, so that we can know that you have received the letter and that we are registered?</p> <p>Regards</p> <p>Lentelie Fourie 8508100004088</p> <p>(I will also copy 3 letters from my community friends that do not have email or data available. 		<p>As Interested and Affected individuals we like to comment on the new Township referenced above.</p> <p>Your company name allowed me to have hope that behind this new development we might find a group of people that earnestly are interested in developing a sustainable environment. The words in quotation marks come from a study of the use of earth-pipes to cool air.</p> <p>“Rational use of energy and power is a key to the economic development of human society and to achieve sustainable environment.” https://www.sciencedirect.com/science/article/pii/S1876610214032664</p> <p>Some areas for consideration is cooling and heating of houses in an area known for very hot summers and very cold winters. If the energy exerted in digging trenches for pipes, that will form part of the water reticulation infrastructure can double up for eco-friendly earth cooling and heating systems as explained in the above link, it can be a worthwhile economic model. I am hoping that an overarching management function will form part of the project and that all these elements of development can be co-ordinated, overseen and all opportunities to incorporate cost-effective and ecologically sustainable solutions utilized. For example, when the foundations for homes are being dug, the alternative cooling systems installed. Boegoeberg development can become a pilot project for arid community development.</p> <p>Parks, Sport and recreational space, bigger plots and proper roads are some other concerns. I do not have any experience in the above, but do have experience in waterless sanitation options. I have compiled some thoughts, experience from others and links pertaining to waterless sanitation for your consideration.</p> <p>Do forgive me if the sanitation document is far too simplistic or lay-men orientated, but I have no idea who will read this letter and the document.</p>	<p>Respondent: EAP</p> <p>Noted with thanks. This application for Environmental Authorisation is in line with the National Environmental Management Act (NEMA).</p> <p>Noted. Thank you for your research into the subject. An Engineering Report detailing services infrastructure, will also be included in the EIR.</p> <p>Noted, this will be addressed by the Municipality (Applicant) and/or town planners in the EIR.</p>

		<p>Interested and Affected Individuals, from lot 586/and 1464 that from part of lot 1018, as part of the Boegoeberg Community, one of the closest lots to the new proposed Township.</p> <p>Kind regards Daniel and Maryna Heese</p>	<p>Please note: All registered I&APs will be given the opportunity to comment on the draft EIR.</p>
25		<p>Regarded members of the Municipality,</p> <p>Re. Toilets</p> <p>I would like to share some thoughts with you regarding the proposed new development.</p> <p>1. TOILETS. We live in a water-scarce country and the water-sources needed to have flush toilets is simply not sustainable in the long run. I have been involved with a KZN NGO in a deep rural area of South-Africa in the Umkhanyakude District. We also have severe water challenges. We in collaboration with Oxfam Australia experimented with alternatives to Flush toilets and Long-Drop Pit latrines. That was my first introduction in waterless technology. We tested two models, one a commercial self-contained unit from Enviro-loo (pictured below) that was costly and a combination of a urine-diversion seat with self-constructed chamber options. I am happy to share our limited experience with you, but highly recommend the far superior functioning model for thousands of people, that can be found with Durban Municipality (eThekweni Municipality). They had been busy with waterless sanitation technology for over 12 years. I have supplied links to websites that explain technically on various levels, the challenges faced with introduction, the success and the research done with various options. So I have pasted both the success and failures and the reason for the failures.</p> <p>2. I will attempt to explain in layman's terms the principle behind different sanitation systems.</p> <ul style="list-style-type: none"> • In pit latrines the urine and faeces are mixed and seepage into the groundwater a reality. Apart from its environmental danger, it is often times not accepted as an option and seen as an insult to a person's 	<p>Respondent: EAP</p> <p>Noted with thanks. The Municipality (Applicant) and/or planners will address service delivery in the EIR. An Engineering Report detailing services infrastructure, will also be included in the EIR.</p>

		<p>humanity. The aspiration of the average person is for a flush toilet as shown in some or the articles in the websites quoted.</p> <ul style="list-style-type: none"> • Flush toilets in a water-scarce country is not a long term solution in any community and all communities should re-consider the cost of using cleaned water to flush toilets. • Ablution blocks for communal use of facilities is not an option. Most people would not feel safe to walk to a communal ablution at night and I personally feels that dealing with your own bodily waste and household waste makes us responsible humans. • Urine separating systems. An extract from a document <p>The UDDTs provide the following benefits: (1) waterless operation; (2) no odour when correctly used and maintained; (3) treated faecal matter is dry, odourless and less offensive; (4) does not attract flies or other vectors; (5) treated faecal matter is partially sanitised and safer to handle; (6) aboveground design or use of containers in belowground vaults makes emptying simple; (7) minimal risk of contamination of ground and surface water resources; (8) possibility of aboveground design facilitates construction in challenging environments; and (9) possibility of construction in close proximity to or inside of the home adds security and convenience for users (Rieck <i>et al.</i> 2012). https://iwaponline.com/washdev/article/7/1/111/30518/Urine-diversion-dry-toilets-in-eThekwin</p> <p>URINE SEPERATING TOILETS. This is the system I would like to propose.</p> <p>Separating urine from faeces allows the faeces to dry out completely, killing pathogens (harmful micro-organisms) and make it manageable. The faeces dries like dog poop in the sun and become small and brittle and whitish. Because it is a waterless system, water is used for household and garden growing.</p> <p>There are various methods to separate urine and faeces.</p> <p>1. ENVIRO-LOOS</p>	<p>Response from EAP/Applicant/Specialist/Project Manager</p> <p>Please note: All registered I&APs will be given the opportunity to comment on the draft EIR.</p>

No.	Comment Date, Comment Format, Organisation/I&AP	Comment	Response from EAP/Applicant/Specialist/Project Manager
		<p>The Enviro loos system allow both urine and faeces to enter the chamber together and then the content falls on a sloped perforated surface...a hard plastic sheet with holes at an angle, that allows the urine to seep through the holes into the bottom enclosed chamber, with a pipe that leads to a urine soak-away pit nearby. The faeces then dries out, needs to be raked to the back of the box from time to time and then the hard dry faeces needs to be collected after a year or more to be disposed of. The challenge with this system is that the holes can block and the angle is not steep enough for the faeces to slide down. They remain wetter longer and there is an extraction fan at the top of the chimney to eliminate most smells.</p> <p>It needs a full sun site, additional power for the extraction fan and people living higher might still get a whiff from the extraction fans, but the biggest deterrent is possibly the cost, it is more expensive. It is the best application for schools and community halls as seen in the photo below. The two glass tops are for the urinals. It is a very good method of coping with the urine. The urine dries into crystals. https://www.greenloo.org/enviro-loo-urinal.php</p> <p>2. URINE SEPERATION TWO CHAMBER SYSTEM</p> <p>a. An attempt is made to separate urine from faeces before the faeces drops down the seat. It is important for the success and acceptance of the systems to buy white high quality urine separation pedestals/seats. As can be seen in the photo below the system can be incorporated into the bathroom. It is advised to incorporation of a urinal against the wall in the blue bathroom picture as well. The urine can be collected in the same container the seat urine is diverted to.</p> <p>b. Build a two chamber system. Faeces are collected in one chamber until it is full, the seat is then removed and placed over the new empty chamber. The seal of the empty chamber is placed over the full chamber. The full chamber is left like it is until the second chamber is almost full. By now the faeces should be dried out. The dried out faeces is accessed through the sealed back wall and either disposed of or ground up and</p>	<p>Response from EAP/Applicant/Specialist/Project Manager</p> <p><i>Please note: All registered I&APs will be given the opportunity to comment on the draft EIR.</i></p>

		<p>used as fertilizer in agricultural applications. The municipality can collect and dispose of the dried faeces.</p> <p>c. The selection of the site: It is vital for the optimal drying of the faeces that the back wall of the bathroom unit face North. To increase the absorption of the sun rays the back panel and the chimney should be painted black or be manufactured from hard black plastic. Place a mosquito net above the chimney. The bigger the chimney the greater the up draft and reduced smell.</p> <p>d. The urine can be diverted to a soak away, or a solar evaporation site similar to the environ system or utilized in a diluted form in agriculture. It is important to be aware of the hesitance of local communities to use human waste in any form as part of a greater agricultural system and extensive community awareness activities should accompany such use.</p> <p>e. By placing a bucket of sand, ash or sawdust next to the toilet with a little scoop, visual unpleasantness and smell will be further reduced. In addition, the material like ash or sand can accelerate the drying time.</p> <p>f. Should flies find their way into the system, they would try to get out and the only light will be at the top of the chimney that is sealed with a mosquito net. The flies will then fly up and down the chimney until they die. It is highly unlikely if the seat remains closed.</p> <p>In the image above the toilet stool is a porcelain seat, that can also stand on its own, going straight downward without the u-trap of standard toilet seats. To the right on the photo is a urinal, for the use of men, with an outlet that joins the urine caught with the separate division in the seat. This photo was sourced from</p> <p>https://en.wikipedia.org/wiki/Urine-diverting_dry_toilet an example from Peru.</p> <p>This is what a urine separation seat can look like. The front chamber catches the urine and the dark blue is where the faeces drops down into the chamber. In this photograph there is a division that is not there. It is a pipe that have straight sides.</p>	<p>Response from EAP/Applicant/Specialist/Project Manager</p> <p>Please note: All registered I&APs will be given the opportunity to comment on the draft EIR.</p>

<p>1. The purpose of the whole exercise is to obtain correct information from professionals to address the shortcomings and comply with legislation to render basic services to our communities.</p> <p>2. That this Council adhere to the call of its poor residents to avail land for housing purpose.</p> <p>3. The Technical reports will address the needs and will serve as business plans to obtain financial support from Government institutions.</p> <p>4. To obey to the course of restoring dignity to poor people and correct the imbalances of the past.</p>			
Comments Received on Draft Scoping report			
26	Date: 28 th August 2020 Format: Email Letter I&AP: SAHRA	<p>Interim Comment</p> <p>SAHRA requires the draft EIA documents before further comments can be issued.</p> <p>Should you have any further queries, please contact the designated official using the case number quoted above in the case header.</p>	Respondent: EAP Noted, thank you. The draft EIR will be made available to SAHRA for comment.
27	Date: 22 nd September 2020 Format: Email Letter I&AP: Gariiep Watch	<p>The July 2020 EnviroAfrica draft Scoping Report and Plan of Study for the above-mentioned development of 730 erven on 50 ha at Opwag has reference.</p> <p>Thank you for registering Gariiep Watch as an Interested and Affected Party and incorporating our correspondence of 17 June 2020 in the draft Scoping Report. This letter highlighted our concerns that pertain to the lack of wastewater infrastructure and maintenance of existing wastewater infrastructure at the !Kheis local municipality.</p> <p>We agree that housing is necessary to promote socioeconomic development and to provide the basic needs of the Opwag community. However, the process of urbanization and population growth, if not handled carefully, may result in increased surface and ground water pollution towards the Orange River. Intensive urban growth far from job opportunities can also lead to greater poverty with local governments unable to provide services for all people.</p>	Respondent: EAP Noted. Noted. Noted.

No.	Comment Date, Comment Format, Organisation/I&AP	Comment	Response from EAP/Applicant/Specialist/Project Manager
		<p>Our comments pertaining to this application for an extension of the Opwag settlement are as follows:</p> <p>1. The proposed extension of the Opwag settlement will interfere with two well-defined drainage lines that flow directly into the Orange River. Although the identification of site alternatives may not be feasible as noted in the Scoping Report, layout alternatives should be considered especially since the development will be within a Critical Biodiversity Area. The drainage lines to the north-west and west of Portion 14 of Farm 48 could be avoided completely without the loss of much development potential. We therefore believe that the layout could be tailored to exclude sensitive drainage lines, corridors or riparian zones.</p> <p>2. No existing wastewater infrastructure was noted at Opwag and it is presumed that each house is equipped with a septic tank that is emptied by the municipality. It is uncertain where the wastewater is disposed of by the municipality but not inconceivable that it is discharged into the veld close by. This aspect should be investigated.</p> <p>3. It is recommended that specialist botanical studies should be performed as part of the EIA to delineate the two watercourses and its associated vegetation. A ground water investigation should also be performed as part of the freshwater impact assessment.</p> <p>4. River health indices will not be feasible on the ephemeral drainage lines but could be conducted in the Orange River up-stream and down-stream from the proposed development. Aspects pertaining to solid waste, stormwater, groundwater and wastewater management should be key components of the Environmental Impact Assessment. All necessary measures must be put in place to prevent any pollution from reaching the Orange River.</p>	<p>Response from EAP/Applicant/Specialist/Project Manager</p> <p>Please note: All registered I&APs will be given the opportunity to comment on the draft EIR.</p> <p>1. Noted. Alternative layouts, incorporating environmentally sensitive areas (including watercourses identified by the Freshwater Specialist), will be included, and addressed in the draft Environmental Impact Report (EIR). A Botanical Assessment will be included in the draft EIR.</p> <p>2. Noted. There is no Sewerage Bulk Infrastructure in the existing Opwag Settlement. The current status of sewage infrastructure will be addressed in the Engineering Services Report, prepared by Bvi, which will be included in the draft Environmental Impact Report (EIR). Recommendations made in the Services Report will be incorporated in the Draft EIR.</p> <p>3. Noted. A Botanical, Freshwater, and Heritage Assessment will be included in the draft EIR. These specialist studies will address the sensitive areas associated with the proposed Opwag Development Footprint, including the identification of any watercourses within this footprint.</p> <p>4. Noted. The Freshwater Impact Assessment will be included in the draft EIR. The Freshwater Assessment may use reference sampling sites along the Orange River, within close proximity to the proposed site for development. River water quality will be addressed in the Freshwater Report and will be included in the draft EIR. The Engineer's Services Report, prepared by Bvi, will address waste management (sewage and solid waste) and water supply. Mitigation measures, including recommendations and mitigation measures as per the Specialist Reports, will be included in the Environmental Management Programme (EMPr) and EIR.</p>
