3.8 Land use description

3.8.1 Describe the current land use of the proposed site(s) for the activity

The proposed site is zoned for agricultural purposes and is surrounded by agricultural land uses. The proposed site is located on an undeveloped part of the property and is located adjacent to existing farm road.

The proposed site is currently used for grazing and are used to store bales of hay. A pile of poles is also on site (see **figure 1**). The north-eastern section of the dam will be located within vineyards and the south-eastern to south-western part of the site will be located within existing grape vineyards and citrus orchards (see **figure 1** and **Appendix B**). A small non-perennial stream crosses the proposed site and will be completely altered into an instream dam (see **Appendix D**). The site is currently being used for agricultural purposes. Please refer to **Appendices A to D** for more detail.

According to the vegetation map (**figure 3**) the vegetation that would have been present on the site is Swartland Shale Renosterveld. This type of vegetation is classified as Critically Endangered in the Western Cape in terms of NEMBA National list of Ecosystems that are threatened and in need of protection. From **Figure 1** below it is clear that little of the natural vegetation is present on site. Please refer to **figures 1 – 7, Appendix B and Appendix D**.

Figure 1: A view of the site north-eastern part of the site, looking in an eastern direction.

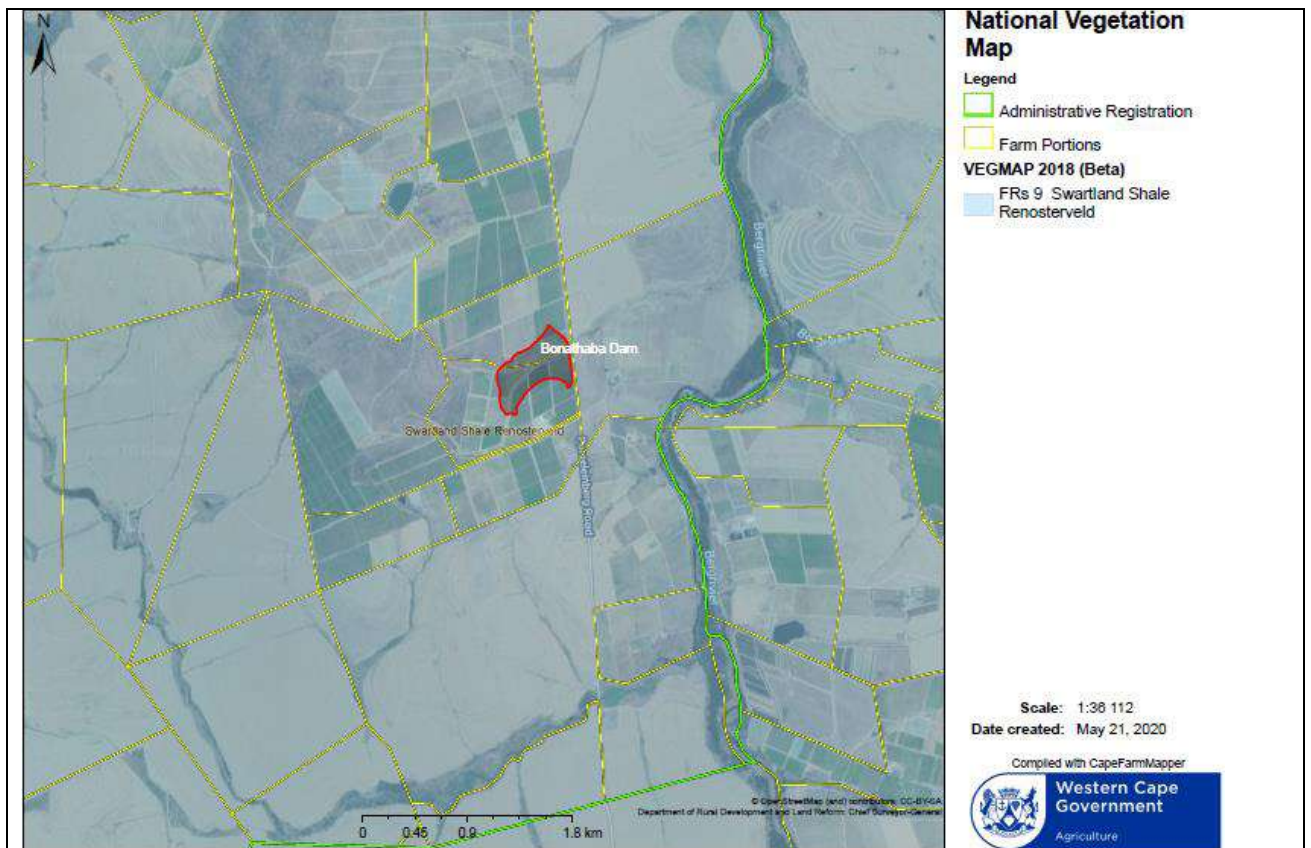

Figure 2: The proposed site (red polygon) is located within an area that would have contained Swartland Shale Renosterveld which is classified as Critically Endangered. However, the site is transformed due to past agricultural activities.

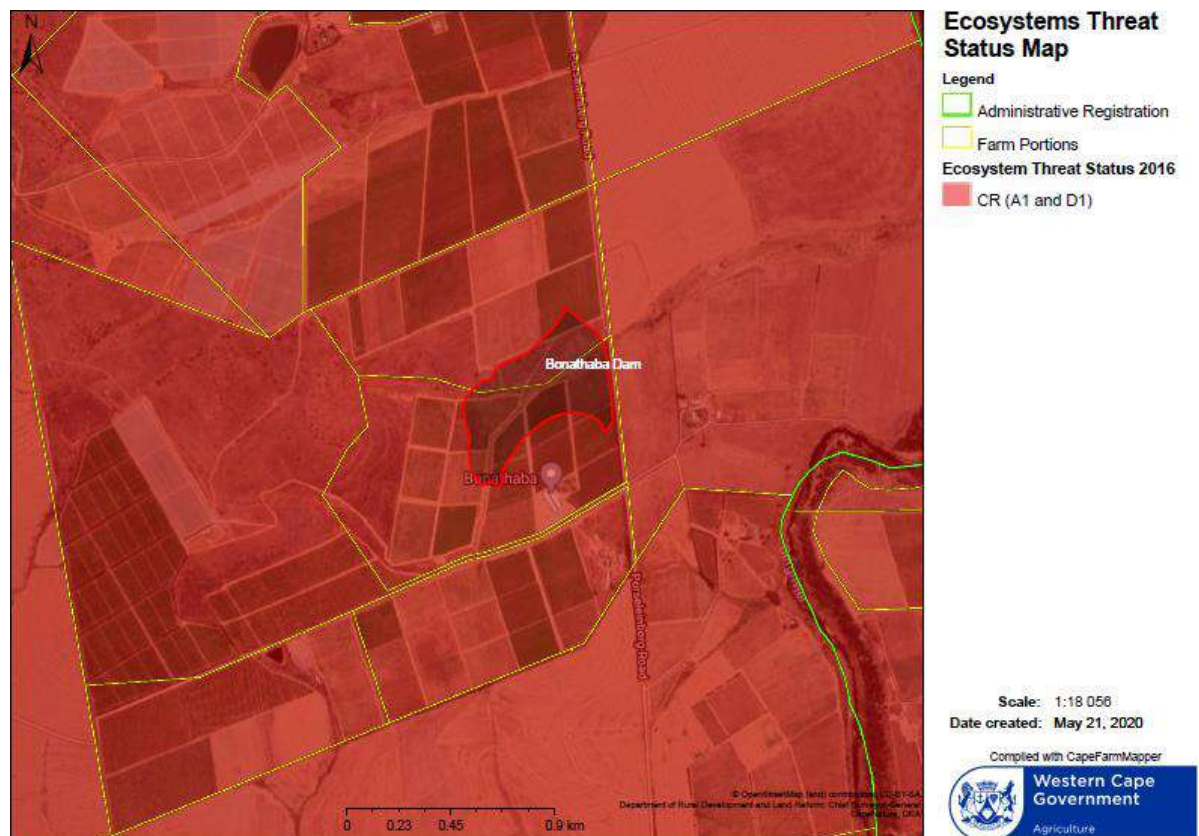

Figure 3: The proposed site (red polygon) is located within the Swartland Shale Renosterveld vegetation type, which is classified as Critically Endangered in the Western Cape in terms of the NEMBA National list of Ecosystems that are threatened and in need of protection.

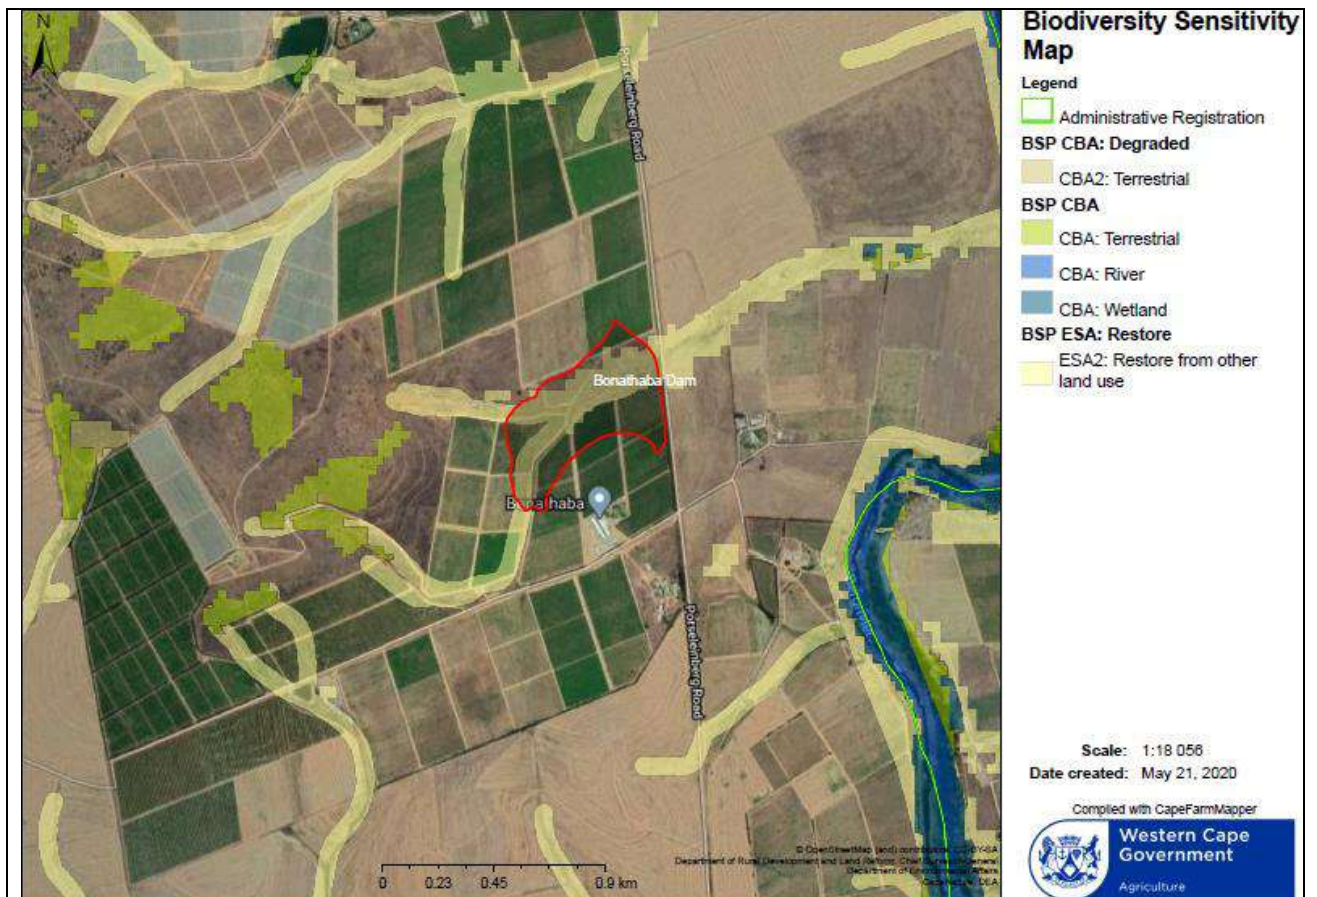

Figure 4: The proposed site (red polygon) is located within an Ecological Support Area 2 (ESA2) and has a non-perennial watercourse on site. ESA 2 are areas that are not essential for meeting biodiversity targets, but that play an important role in supporting the functioning of PAs or CBAs and are often vital for delivering ecosystem services. The objective of ESA 2 is to restore and/or manage to minimize impact on ecological processes and ecological infrastructure functioning, especially soil and water-related services, and to allow for faunal movement. However, the vegetation on site is completely transformed due to past agricultural activities.

3.8.2 Describe the surrounding land uses

The proposed site is zoned for agricultural purposes and is surrounded by agricultural land uses. The area surrounding the proposed site are being used for intensive agricultural farming practices. The surrounding area are being farmed with table grapes, citrus fruit, guava fruit, pomegranate, wheat, canola and vegetables. Please refer to **Appendix A** and **Figures 1 to 7**.
