

## ECO CONSTRUCTION SITE ENVIRONMENTAL INSPECTION REPORT

Project Name:	Upgrade of Klaarstroom Oxidation ponds	Report no	3
Main Contractor:	De Jager Loodgieter Kontrakteurs	Date	25 June 2020
ECO:	Bernard de Witt	EnviroAfrica Ref. no.	

ENVIRONMENTAL ASPECT		RATING	FINDINGS & RECOMMENDATIONS
RAT	TING: 1 = EXTREMELY POOR 2 = POOR	3	= AVERAGE 4 = GOOD 5 = EXCELLENT
1.	<b>DEMARCATION</b> Boundaries of "no go" areas, construction sites, -offices, temporary storage areas as well as labourer's facilities must be demarcated (EMP and ECO requirements) and maintained for the length of the construction period.	4	Site demarcation is in place. Total site is demarcated with strong steel droppers with wire and traffic tape attached to it for good visibility Site demarcation is well maintained
2.	<ul> <li>NO-GO AREAS</li> <li>Identified "No-Go Areas", must be demarcated for protection from construction damage (including secondary impact).</li> <li>All areas outside of the demarcated construction site(s) and access road(s) to be regarded as NO-GO areas, including remaining natural veld identified trees.</li> <li>Special attention to identified areas with significant vegetation.</li> </ul>	4	All areas outside the demarcation is no go areas. Due to the proper demarcation accidental entrance to no go areas is highly unlikely
3.	<b>SEARCH &amp; RESCUE</b> All flora identified for search & rescue must be removed before any construction take place and re-used in pre-approved way.	4	In order. No search and rescue are required
4.	<ul> <li>VEGETATION &amp; TOPSOIL REMOVAL</li> <li>Before any construction or earthworks, topsoil must be stripped (&gt;150mm) and stockpiled for rehabilitation/ landscaping.</li> <li>Stockpiles:</li> <li>must be protected (erosion) and stored separately.</li> <li>may not be moved further than 50m or mixed with any other soil.</li> <li>must be convex and should not exceed 2m in height.</li> </ul>	4	Topsoil used for rehabilitation of stormwater berm and trench at the site. Area well rehabilitated Aloes present on site were well looked after and secured

22.	<ul> <li><b>REHABILITATION</b> <ul> <li>On completion of the project or phase, all areas impacted by the construction activities must be reinstated and/or rehabilitated to the satisfaction of the ECO with emphasis on the following:</li> <li>Site offices must be removed and the areas rehabilitated or reinstated to the satisfaction of the ECO.</li> <li>Labourer's facilities must be removed and the areas rehabilitated or reinstated to the satisfaction of the ECO.</li> <li>All construction site areas must be rehabilitated or reinstated to the satisfaction of the ECO.</li> <li>All construction site areas must be rehabilitated or reinstated to the satisfaction of the ECO.</li> <li>All temporary fencing and demarcation must be removed and the areas reinstated to the satisfaction of the ECO.</li> <li>Temporary storage areas must be rehabilitated or reinstated to the satisfaction of the ECO.</li> </ul> </li> </ul>	3	Will take completed	place when cons	struction phase	is
	<ul> <li>satisfaction of the ECO.</li> <li>Any additional disturbed areas must be rehabilitated or reinstated to the satisfaction of the ECO.</li> </ul>					
23.	SPOT FINES & PENALTIES					
	Spot fines and penalties must be recorded and documented by the ECO (in accordance with the EMP).	N/A				
24.	FIXED POINT PHOTOS Photographs must be taken by the ECO, Site Engineer and or Site Manager, prior to, during and immediately after construction as visual reference. These photographs must be stored with other records relating to the EMP.	4	Photos tak	en by ECO. Available	e on request	

## **ECO COMMENTS**

Site in a general good and clean state.

Sludge drying pond constructed. Sludge must dry and samples taken to determine the disposal of the dried sludge. During site visit sludge was still too wet to be tested

Sludge pond still drying out

Cement mix on plastic

## **End of report**
